MANAGEMENT DISCUSSION & ANALYSIS**1. Economic Overview****1.1. Global Economy**

The global economy grew at a sluggish pace in FY 2015-16 primarily impacted by developments in the commodities sector, especially the fall in oil prices, monetary policy decisions across countries, sharper-than-expected slowdown in the Chinese economy; and a volatile financial and political environment in emerging markets.

While growth in the developed countries remained modest as the countries struggled to escape the legacies of the financial crisis, weakness in the Chinese economy along with the commodity-price downswing and the US Federal Reserve's move to start raising interest rates, affected the emerging economies around the world

The World Bank's baseline projection for global growth for CY 2016-17 is expected to be modest; 2.4% primarily on account of a slower-than-expected recovery in advanced economies. The recovery is projected to improve marginally in CY 2017-18 and strengthen beyond, driven primarily by emerging market and developing economies, as conditions in stressed economies start gradually to normalize.

However, uncertainties continue to exist and risks of weaker growth scenarios need to be mitigated by broad-based structural and monetary policy reforms across developed and emerging countries. Stronger near-term fiscal policy support, with a focus on bolstering future productive capacity and financing demand-friendly structural reforms should provide a significant impetus to growth.

1.2. Indian Economy

The Indian economy continued to exhibit resilience and the strength of its domestic absorption to register a growth of 7.6 per cent during the year 2015-16. It is expected to grow up to 8% during the current fiscal. Manufacturing Sector accelerated at 9.3% as against 5.5% during the last Year. That this has been attained, despite the highly tentative global economic environment that has not shown credible signs of improvement and despite sub-par monsoon rains that for the second year in succession resulted in low growth in agriculture sector, is an encouraging development. Economic growth, measured in terms of growth in GDP at constant market prices.

In addition to robust growth, the year thus far has witnessed macro-economic stability aided by favourable factors such as comforting in action indicators, benign fiscal situation and improving external current account balance. All these have resulted in India emerging as the fastest growing economy among the large economies, and, most agencies have predicted that it will continue to remain so in the medium term.

With the help of Make in India drive, India is on the path of becoming the hub of hi- tech manufacturing as global companies are in the process of setting up manufacturing plants in India. It has become one of the most attractive destinations for investments in the Manufacturing sector. Make in India campaign has opened many avenues to the Forging Industry. The Make in India initiative has definitely been a good move in the right direction to give the necessary boost to the overall manufacturing sector. It has created an all-round positive business environment and sentiments.

2. Industry Structure:

The automobile industry forms the crux of the Indian forging industry. Despite the earnest attempt of diversification to non-auto sector, automotive sector continues to contribute 60 per cent of the total forging production. In the last 25 years, the Indian auto industry has emerged as one of the largest in the world with an annual production of 23.37 million vehicles in FY 2014-15, following a growth of 8.68 per cent over the last year. The automobile industry accounts for 7.1 per cent of the country's gross domestic product (GDP).

The growing number of young population and the bulging middle class segment with increase in purchasing power has made the two-wheeler segment the leader of the Indian automobile market with about 81 per cent market share. The industry has started to revive from 2014-15 onwards. Despite being the largest three-wheeler industry, in terms of domestic sales and exports, the Indian three wheelers segment is yet to see a full-fledged recovery.

The automotive industry has achieved the target of incremental employment creation of 25 million jobs over the last decade. Secondly, Indian automotive industry has bypassed the target 1, 57, 500 crore due to a significant quantum of investments from foreign and domestic OEMs as well as component manufacturers.

The Indian auto industry has attracted foreign direct investment (FDI) worth US\$ 13.48 billion during the period April 2000 to June 2015, according to data released by Department of Industrial Policy and Promotion (DIPP). Indian automobile industry has huge growth potentials. According to the market research firm JD Power Asia Pacific, India would become the third largest market in the world after China and USA with respect to light vehicles by 2020.

The Indian forging industry, as a part of the manufacturing sector, has played a significant role in the Indian economy. With setting up of international purchasing offices (IPO) by major global OEM and Tier-1 industries lot of forging companies in India are expected to play a bigger role in their sourcing strategy. In order to meet their expectations the Indian forging industries

have already expanded their operational spectrum to cater to finished and ready to assemble parts rather than supply of simple forgings. With business sentiments having improved in India, in the coming years we expect to see improved business activity which will consequently push the demand for forging products as well as exports

3. Opportunities & Threats:

Opportunities:

1. Locally availability of raw materials.
2. Steady Domestic Demands.
3. Increasing Demand for quality Products.

Threats:

1. Increase in price of raw material and increase in energy costs:

The main raw material for the forging industry is steel, while the other major cost heads are energy and consumables. One major challenge that has been impacting the industry is the unstable price of steel and rising prices of fuel and power. Power is vital component of any forging operation, power shortage as well as high unit rates charged to industry is major concern. Inadequate power supply leads to usage of diesel generator sets thereby increasing the costs.

2. Government Policies and Market Competitiveness:

Inadequate support from Government, related to duties and taxes on forging units is a big disadvantage, because international competitors like China, Thailand and Pakistan are in position to supply forged components at lower costs. This is mainly due to substantial subsidies and rebates offered by their Governments.

3. Non availability of skilled manpower:

Although manpower cost accounts for almost 8 to 10% of the total production cost, not only the company by industry faces a dearth of skilled manpower. To address this issue the company has undertaken a college-connect initiatives wherein engineering colleges are being approached for placements.

4. Product-wise Performance

The Company is mainly engaged in Manufacturing of Steel Forgings, Flanges and Forged Fittings for oil & gas industry, Petrochemicals and refineries. The entire range of the products is classified as one product only as they are different parts of the sets.

5. Outlook:

Company's strategy for the new business development is to identify new programs of existing and new customers for early engagement as well as horizontally deploy the existing products to new markets or customers. The company is strengthening the new business development team with key result areas. It is the need of the hour that the engineering needs to be in tune with latest practices and technologies to remain competitive at the global level. Company also has started to explore the supply potential of forging parts to Railways, turn key projects, earthmoving equipment manufacturers and the defense sector.

More than half of the turnover of the company is achieved through Exports. The company is taking initiative and putting major thrust on exports. The company has policy to take part in exhibitions on or for Forging Products and Steel products held world-wide. This has benefitted the company since it could include quite a few new customers in its client base. The Company intends to explore the possibility of stock and sell in the US market especially in Oil and Gas sector. Various persons / agencies have been recruited to prepare the feasibility report.

6. Risks and Concerns:

The forging industry, which caters the needs of many sectors, is a critical industry that generates employment, has been continuously plagued with incessantly rising industrial fuel and steel prices resulting in rising input costs and shrinking margins. While tapping the growth opportunities, the major risks and areas of concern for the forging industry are increasing input costs such as rising raw material prices and high price of power, inadequate supply of power, unavailability of skilled and unskilled labor, lack of infrastructure among companies in Small & Very Small scale etc. Further being basically a high capital intensive industry, due to lack of future commitment of sales schedules from customers, there is a risk of the complete production line going idle. In addition retention of talent, both at operator level and at managerial level is a major concern. Being a Technology Company, hiring and retaining top-notch talent is a key to continued success of our Organization.

7. Internal Control Systems and their adequacy

The Company has in place internal financial control systems, commensurate with the size and complexity of its operations to ensure proper recording of financial and operational information and compliance of various internal controls and other regulatory and statutory compliances. The internal auditor monitors and evaluates the efficacy and adequacy of internal control systems in the Company. Based on the report of the internal auditor, respective departments undertake corrective action in their respective

areas and thereby strengthen the controls. Significant audit observations and corrective actions thereon are presented to the Audit Committee of the Board

1. Corporate Information:

Hilton Metal Forging Limited established in 2005 is a manufacturer of iron and steel forging, recognized export house, presently catering to the needs of Oil and Gas, Refineries and pharmaceutical industries. The company has its plant at Village Ghonsai, Taluka Wada, Dist Palghar and Corporate office at 701 Palm Spring, Link Road, Malad West, Mumbai 400064, Maharashtra.

2. Basis of Preparation

The financial statements of the company have been prepared in accordance with the generally accepted accounting principles in India (Indian GAAP). The company has prepared these financial statements to comply in all material respects with the accounting standards notified under section 133 of the Companies Act 2013, read together with paragraph 7 of the Companies (Accounts) Rules, 2014 and Companies (Accounting Standards) Amendment Rules, 2016. The financial statements have been prepared on an accrual basis and under the historical cost convention.

The accounting policies adopted in the preparation of financial statements are consistent with those of previous year.

3. Significant accounting policies:**(a) Use of estimates**

The preparation of financial statements in conformity with Indian GAAP requires the management to make judgments, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities and the disclosure of contingent liabilities, at the end of the reporting period. Although these estimates are based on the management's best knowledge of current events and actions, uncertainty about these assumptions and estimates could result in the outcomes requiring a material adjustment to the carrying amounts of assets or liabilities in future periods

(b) Plant, Property and Equipment

Plant, property and equipment, capital work in progress are stated at cost, net of accumulated depreciation and accumulated impairment losses, if any. The cost comprises purchase price, borrowing costs if capitalization criteria are met, directly attributable cost of bringing the asset to its working condition for the intended use and initial estimate of decommissioning, restoring and similar liabilities. Any trade discounts and rebates are deducted in arriving at the purchase price. Such cost includes the cost of replacing part of the plant and equipment. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in profit or loss as incurred.

Items of stores and spares that meet the definition of plant, property and equipment are capitalized at cost and depreciated over their useful life. Otherwise, such items are classified as inventories.

The company identifies and determines cost of each component/ part of the asset separately, if the component/ part has a cost which is significant to the total cost of the asset and has useful life that is materially different from that of the remaining asset.

(c) Borrowing costs

Borrowing cost includes interest and amortization of ancillary costs incurred in connection with the arrangement of borrowings.

Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalized as part of the cost of the respective asset. All other borrowing costs are expensed in the period they occur.

(d) Foreign currency transactions and translationsInitial recognition

Transactions in foreign currencies entered into by the Company and its integral foreign operations are accounted at the exchange rates prevailing on the date of the transaction or at rates that closely approximate the rate at the date of the transaction.

Measurement of foreign currency monetary items at the Balance Sheet date

Foreign currency monetary items (other than derivative contracts) of the Company and its net investment in non-integral foreign operations outstanding at the Balance Sheet date are restated at the year-end rates.

In the case of integral operations, assets and liabilities (other than non-monetary items), are translated at the exchange rate prevailing on the Balance Sheet date. Non-monetary items are carried at historical cost. Revenue and expenses are translated at the average exchange rates prevailing during the year. Exchange differences arising out of these translations are charged to the Statement of Profit and Loss.

Treatment of exchange differences

Exchange differences arising on settlement / restatement of short-term foreign currency monetary assets and liabilities of the Company and its integral foreign operations are recognized as income or expense in the Statement of Profit and Loss. The exchange differences on restatement / settlement of loans to non-integral foreign operations that are considered as net investment in such operations are accumulated in a "Foreign currency translation reserve" until disposal / recovery of the net investment.

The exchange differences arising on restatement / settlement of long-term foreign currency monetary items are capitalized as part of the depreciable fixed assets to which the monetary item relates and depreciated over the remaining useful life of such assets or amortized on settlement / over the maturity period of such items if such items do not relate to acquisition of depreciable fixed assets. The unamortized balance is carried in the Balance Sheet as "Foreign currency monetary item translation difference account" net of the tax effect thereon.

Accounting of forward contracts

Premium / discount on forward exchange contracts, which are not intended for trading or speculation purposes, are amortized over the period of the contracts if such contracts relate to monetary items as at the Balance Sheet date

(e) Government grants, subsidies and export incentives

Export benefits are accounted for in the year of exports based on eligibility and when there is no uncertainty in receiving the same.

Long-term investments (excluding investment properties), are carried individually at cost less provision for diminution, other than temporary, in the value of such investments. Current investments are carried individually, at the lower of cost and fair value. Cost of investments include acquisition charges such as brokerage, fees and duties.

Investment properties are carried individually at cost less accumulated depreciation and impairment, if any. Investment properties are capitalized and depreciated (where applicable) in accordance with the policy stated for Tangible Fixed Assets. Impairment of investment property is determined in accordance with the policy stated for Impairment of Assets.

(f) Retirement and other employee benefits

Retirement benefit in the form of provident fund is a defined contribution scheme. The company has no obligation, other than the contribution payable to the provident fund. The company recognizes contribution payable to the provident fund scheme as expenditure, when an employee renders the related service. If the contribution payable to the scheme for service received before the balance sheet date exceeds the contribution already paid, the deficit payable to the scheme is recognized as a liability after deducting the contribution already paid. If the contribution already paid exceeds the contribution due for services received before the balance sheet date, then excess is recognized as an asset to the extent that the pre payment will lead to, for example, a reduction in future payment or a cash refund.

The company operates defined benefit plan of gratuity for its employees.

Accumulated leave, which is expected to be utilized within the next 12 months, is treated as short-term employee benefit. The company measures the expected cost of such absences as the additional amount that it expects to pay as a result of the unused entitlement that has accumulated at the reporting date.

The company treats accumulated leave expected to be carried forward beyond twelve months, as long-term employee benefit for measurement purposes.

The company recognizes termination benefit as a liability and an expense when the company has a present obligation as a result of past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

(g) Income taxes

Tax expense comprises current and deferred tax. Current income-tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income-tax Act, 1961 enacted in India and tax laws prevailing in the respective tax jurisdictions where the company operates. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date. Current income tax relating to items recognized directly in equity is recognized in equity and not in the statement of profit and loss.

Deferred income taxes reflect the impact of timing differences between taxable income and accounting income originating during the current year and reversal of timing differences for the earlier years. Deferred tax is measured using the tax rates and the tax laws enacted or substantively enacted at the reporting date. Deferred income tax relating to items recognized directly in equity is recognized in equity and not in the statement of profit and loss.

Deferred tax liabilities are recognized for all taxable timing differences. Deferred tax assets are recognized for deductible timing differences only to the extent that there is reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realized. In situations where the company has unabsorbed depreciation or carry forward tax losses, all deferred tax assets are recognized only if there is virtual certainty supported by convincing evidence that they can be realized against future taxable profits.

Deferred tax assets and deferred tax liabilities are offset, if a legally enforceable right exists to set-off current tax assets against current tax liabilities and the deferred tax assets and deferred taxes relate to the same taxable entity and the same taxation authority.

Minimum alternate tax (MAT) paid in a year is charged to the statement of profit and loss as current tax. The company recognizes MAT credit available as an asset only to the extent that there is convincing evidence that the company will pay normal income tax during the specified period, i.e., the period for which MAT credit is allowed to be carried forward. In the year in which the company recognizes MAT credit as an asset in accordance with the *Guidance Note on Accounting for*

Credit Available in respect of Minimum Alternative Tax under the Income-tax Act, 1961, the said asset is created by way of credit to the statement of profit and loss and shown as "MAT Credit Entitlement." The company reviews the "MAT credit entitlement" asset at each reporting date and writes down the asset to the extent the company does not have convincing evidence that it will pay normal tax during the specified period.

(h) Segment reporting

The Company identifies primary segments based on the dominant source, nature of risks and returns and the internal organization and management structure. The operating segments are the segments for which separate financial information is available and for which operating profit/loss amounts are evaluated regularly by the executive Management in deciding how to allocate resources and in assessing performance.

The accounting policies adopted for segment reporting are in line with the accounting policies of the Company. Segment revenue, segment expenses, segment assets and segment liabilities have been identified to segments on the basis of their relationship to the operating activities of the segment.

The Company is mainly engaged in Manufacturing of Steel Forgings and Flanges and Forged Fittings for oil & gas industry, Petrochemicals and refineries, which in the context of Accounting standard (AS) 17 "Segment Reporting" is considered to be the only business segment

(i) Earnings per share

Basic earnings per share is computed by dividing the profit / (loss) after tax (including the post tax effect of extraordinary items, if any) by the weighted average number of equity shares outstanding during the year. Diluted earnings per share is computed by dividing the profit / (loss) after tax (including the post tax effect of extraordinary items, if any) as adjusted for dividend, interest and other charges to expense or income relating to the dilutive potential equity shares, by the weighted average number of equity shares considered for deriving basic earnings per share and the weighted average number of equity shares which could have been issued on the conversion of all dilutive potential equity shares. Potential equity shares are deemed to be dilutive only if their conversion to equity shares would decrease the net profit per share from continuing ordinary operations. Potential dilutive equity shares are deemed to be converted as at the beginning of the period, unless they have been issued at a later date. The dilutive potential equity shares are adjusted for the proceeds receivable had the shares been actually issued at fair value (i.e. average market value of the outstanding shares). Dilutive potential equity shares are determined independently for each period presented. The number of equity shares and potentially dilutive equity shares are adjusted for share splits / reverse share splits and bonus shares, as appropriate.

(j) Research and development expenses

Revenue Expenditure, including overheads on Research and Development is charged out as expenditure through the natural heads of the expenses in the year in which incurred.

(k) Provisions and contingencies

A provision is recognized when the Company has a present obligation as a result of past events and it is probable that an outflow of resources will be required to settle the obligation in respect of which a reliable estimate can be made. Provisions (excluding retirement benefits) are not discounted to their present value and are determined based on the best estimate required to settle the obligation at the Balance Sheet date. These are reviewed at each Balance Sheet date and adjusted to reflect the current best estimates. Contingent liabilities are disclosed in the Notes.

(l) Share issues expenses

Share issue expenses and pre-operative expenses are written off and charged to profit and loss account The balance to the extent not written off is carried as an asset and is amortized over a period of 10 years

(m) Service tax input credit

Service tax input credit is accounted for in the books in the period in which the underlying service received is accounted and when there is no uncertainty in availing / utilizing the credits.
